

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

Are you guaranteeing that I can record ANYthing from my TV and that I will not be restricted in the use of my TV or any other equipment I may use regarding my TV? I want the same opportunities that I currently have and do not want any enterprise to be in control!

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

I want "Hollywood" to stay out of my living room. I want to be able to do what I please in my own home with my own equipment.

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

There should be NO "flag" to determine if my equipment can be used by me!!!

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

I do not believe them. The key here is "proponents of the broadcast flag say this is not their INTENT. But it does not guarantee that it WON'T happen!!! There should be no restrictions of any kind in the use of my equipment or any equipment that I might want to add.

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

There should be NO cost impact put on the consuming public to "protect" Hollywood. There seems to be an aggressive campaign from the "businesses" to deprive the consuming public from the totally free use of our equipment. it seems criminals have more rights than we the public!
